

I am opposed to BPL.

As both a dedicated broadband internet user and a FCC-licensed Amateur Radio Operator, I would like to register my opposition to any Broadband Over Power Line proposal. Amateur Radio is the only service that is completely decentralized, yet proves effective in providing communications throughout the country. BPL interference, as documented in the study submitted by the ARRL, would effectively eliminate the only communications method without centralized networking.

The danger to homeland security is entirely too risky to pursue. I hope the Commission will eliminate this technology at this time. Thank you for allowing my comment.

Sincerely,
Martin D. Watt, CPA (inactive)
